

**AS1604 (1050N)**  
**1 Part low corrosive matt thixotropic adhesive sealant**

**Introduction**

AS1604 is a fast cure 1-part RTV silicone sealant specially formulated for applications requiring a combination of good adhesion, excellent physical and non-corrosive properties. The Oxime based cure system produces excellent physical properties and good adhesion particularly to plastics and many other substrates. Although not totally neutral the cured sealant is very low corrosive in nature.

**Key Features**

- Resistant to fuels
- Low Corrosive
- Good Primerless adhesion

**Use and Cure Information**

**How to Use**

**AS1604** is ready for use. If supplied in cartridges it can be applied using either manual or pneumatic dispensers. It can also be applied from bulk containers using conventional drum dispensing equipment.

**Application and Cure**

All surfaces to which **AS1604** is to be applied should be clean, dry and free from grease, dirt, and loose material. Priming of surfaces is not normally required. If it is being employed as an adhesive, it should be applied to one clean surface and the other clean surface brought into contact with it within 30 to 60 seconds. The recommended thickness of the sealant joint is 1 to 3mm for optimum bond strength. Joints should be left undisturbed for at least 24 hours, but preferably longer to effect sufficient depth of cure. Full cure requires 7 days.
